Shanks Ship Degassing Unit featured in Dutch TV news piece

The new ship de-gassing unit at ATM, part of Shanks Hazardous Waste Division, recently played a leading part in a Dutch television news piece.

The unit removes and destroys harmful waste gasses from ships, which come to ATM to be cleaned. New legislation in the Netherlands will from July 2015 require all inland ships to be degassed into such units, rather than venting fumes into the open air. This change is expected to drive volume growth through our newly commissioned degassing unit at ATM.

The footage shows the scale, innovation and sustainable development that the unit brings.

Notes to editors

Shanks Group is a leading international sustainable waste management business. We meet the growing need to manage waste without damaging the environment. Our solutions reduce greenhouse gas emissions, recycle natural resources and limit fossil fuel dependency.

Shanks uses a range of cost-effective sustainable technologies to make valuable products from what is thrown away and generate increasing returns for shareholders. We produce green energy, recovered fuel, recycled commodities and organic fertiliser.

Shanks operates in four divisions that reflect our markets: Solid, Hazardous, Organics and UK Municipal. It has operations in the Netherlands, Belgium, UK and Canada and employs around 4,000 people.

In its target markets, the Group is at the forefront in providing sustainable waste management solutions for both the public and private sectors.
